Dear Friend:

The enclosed is a further explanation of the software for the Sinclair
Timex 1000 or ZX 80-1 computer.

We hope this will be an aid to you for your further consideration of purchases
of software.

Thank you for your request.

CED Corporation
Software Department

WORD PROCESSOR *TAPE 18.95 LIST 7.95 BOTH 25.95*

Text can be entered line by line or a paragraph at a time. The program will go through the text ending lines at preset lengths. There is an edit function that allows the operator to edit in any way on each line. The program can allow you to shift a line position one space at a time, left or right and you may center any line. It also has a tab feature for indentation or column text. Text can be saved on tape for future use or repetitive use, like DUN letters. Of course there is also an output to a line printer of the text on the operator's command.

M.L. NIT-PICK *TAPE 18.95 LIST 7.95 BOTH 25.95*

This program was designed for the student of microprocessor operation and program design.

You may look at blocks of memory, load HEX code from the key board, see the results of your program run register by register and flag by flag. The program also converts HEX code to decimal and vice versa.

E-Z BOOKKEEPING

* 19.95 TAPE List 8.95 Both 27.95

This program was designed for the small business, a department in a large business, or for the budget-minded homemaker.

Prior to using the program, the user sets up accounts with numbers for identification (IE. MDS. for resale=1 Auto=2 insurance =5). The user may also set up a vendor list in a like manner as above. The expenditures are then taken from a checkbook and/or cash receipts and transferred via the account and vendor numbers, amount and check or receipt number. The computer then categorizes by account number and tallies these accounts for the bookkeeping period in question. It then tallies this period's expenses with the grand total from last period's expenses and generates a total for each expense to date and a grand total for this period, to last period, and to date. You may then get a file print out of the expenses as you entered them, a categorized file of this period, to last period and to date. The program also houses a file for accounts receivable or accounts received. This totalizes after the entries non-taxable expenses, sales tax, and total due or paid. The program was designed with an eye on the *Dome record keeping system for small business.

*Dome is a registered trademark.

CHECKING ACCOUNT

TAPE 9.95 List 5.95 Both 14.95

This program was designed to work with the E-Z Bookkeeping program, but can be used by itself with no problems. The program becomes your check register and can keep up to 200 checks in a single file. The checks are numbered automatically and each check can be categorized with an account number and vendor number, eliminating the need to type in the above information for each check. Regularly paid expenses like Gas Co., rent, credit card, can have a number. When the number is entered at the appropriate time, the name corresponding to that number is typed for you. These names and account titles are carried from one tape file to the next and only have to be entered once in a lifetime. The accounts and vendors may also be changed at any time the user wishes. The file is set up in the following format:

File No.	:	
Account No.	:	2
		Auto
Vendor No.	:	3
		Joe's Gas Station
Amount	:	\$120.00
Deposit	:	\$205.27
Balance	:	\$892.56

5 BUSINESS PROGRAMS V.1.0.

Housed inside this program are five fast moving programs that can give a wealth of information about the activity in a business. The programs are listed below:

1. Business Forecasting
2. Ratio Analysis
3. Break Even Analysis
4. Try Before You Buy
5. Price and Bidding

BUSINESS FORECASTING

This provides for the forecasting of activity by using the moving average method. The forecast for a given period is decided by averaging the information for a specified number of previous periods. It can also be used for forecasting projected sale of items or services, giving the user the opportunity to prepare for upturns in demand.

RATIO AND ANALYSIS

This item provides the user with several ratios that are very useful in business. The ratios calculated are: current ratio, net profit to sales, investment turnover, earnings on investment, and the inventory turnover.

BREAK EVEN ANALYSIS

An important item to know is when you are going to break even for the production of a good or service you provide. This program will find that point for you using your breakdown of costs. The outcome will astound you. We used it and found that we could lower our price for our programs we sell and still make a reasonable profit.

TRY BEFORE YOU BUY

You will find this very useful in buying on time payments for things like property, cars, computers, etc. It calculates your monthly cost of owning the item, including the interest, upkeep, personal property tax, and other expected expenses.

PRICE AND BIDDING

This program and help you price a job or service profitably and competitively.
